SafeGrass™ for playgrounds is a safety surfacing system that provides grass like performance with long life, and low maintenance. SafeGrass™ is designed specifically for use under play equipment and meets all ASTM 1292-04 and ADA safety surfacing guidelines.

SafeGrass™ is a comprehensive layered application utilizing existing ground cover. A sub-base of concrete, crushed stone or asphalt is not required. The middle layer is a dynamic drainage and shock attenuation blanket that distributes water to the perimeters. There will never be any standing water. The top layer, or "wearing layer", is a 69 oz. polyethylene, highly durable, grass like synthetic turf surface. Each project is priced individually on a per square foot basis by ARP or a member of our national network of representatives.

Every SafeGrass™ safety surface system includes quality components, quality installation, and a comprehensive five year warranty... all backed by ATHLETIC & RECREATION PRODUCTS, INC.

For more information on SafeGrass™, or any ARP product in our complete line of safety surfaces and synthetic turf athletic fields, please call us at 877-439-0321. Let ARP provide you with quality surfacing that stands the test of time.
